

Subway Surveillance

Taipei, Taiwan, 2007

In train and subway stations, video surveillance systems can help prevent crime activities and protect commuters at night. The authorities of Taipei MRT system installed surveillance system for security purpose . In the stations there are dangerous sections, such as platform gap and the rail areas, hence the cameras monitor such areas to avoided accidents and injuries.

JetNet 2005

- Compact size saving the Din-Rail spaces
- Relay alarm for port failure

JetCon 1301

- 10/100TX to 10/100FX converter for long distance transmission
- Auto link loss forward for fault detection
