

Surveillance in Tunnel

Taiwan, 2009

Kaohsiung, the largest sea transportation city of Taiwan, installed a safety and traffic monitoring system in their underground tunnels which connect the port and the main arterial routes from/to the downtown. The system requires the construction and future maintenance time as short as possible to reduce the impact on the heavy traffic.

Why JetNet 3706-RJ

- Waterproof, Dust-tight, Anti-Vibration
- PoE Technology cuts down both the setup, maintenance time and cost
- Easy installed Rugged RJ45

Why JetCon 3401G

- Gigabit bandwidth for video transmission
- Transmit video streams to the traffic center several kilometers away through optic fiber
